

### Risk Profile Description

The portfolio aims to have 100% exposure to equity and property assets. Over the medium to longer term, the 100% exposure to risks and expected rewards of equity ownership should help to deliver, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets.

### Portfolio Comments

October saw a rebound in equity markets following the slight decline in September, with the US, Europe and UK markets all up over 3%. The month was dominated by the continued increase in global energy prices, with OPEC and Russia reluctant to increase production of oil and gas. This was positive for the energy sector but increased concerns around global inflation. We also saw further collaboration around corporation tax with 136 countries agreeing to have a minimum tax rate of 15% which is designed to increase tax revenue from international companies.

In the UK there were no major announcements from the budget which impacted stock markets, but the ONS upgraded the growth and inflation expectations for the UK, with inflation expected to hit over 5%.

All major sectors were positive for the month with Consumer Discretionary, Energy and Technology being the strongest performing. In the US, Technology outperformed the wider US markets, boosted by a rally in the sector.

Looking at factors, Momentum, Growth and Quality were the strongest performing with Value and Small Cap being the worst performing, but still produced positive returns.

Turning to defensive assets, the Bloomberg Barclays Global Aggregate index, decreased by 1.76% with government bonds outperforming corporate bonds and high yield.
