

### Risk Profile Description

The portfolio aims to have 30% exposure to equity and property assets and 70% exposure to Fixed Interest securities. Over the medium to longer term, the 30% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets. The equity risk is balanced by a 70% allocation to high-quality bonds and investment grade bonds.

### Cumulative Tempo 30 returns of £100k invested

## Portfolio Comments

All major markets made positive ground over the month despite the war in Ukraine. A rebound in oil prices, the Fed's current outlook on interest rates and a continuing rise in bond yields all aided positive sentiment.

There has also been some solid economic data and rising earnings expectations, together with hopes, by some, that equities will be a hedge against the threat of higher inflation. However, if we look at growth assets, whilst the market rebound continues the risks around the conflict in Eastern Europe remains high.

There is intense economic pressure from the sanctions being applied to Russia, that may force both sides to accept a peace deal, which would be good short-term news for global equity markets. On the other hand, any further escalation could see a disruption to energy and other commodity supplies and the risk of this has seen oil and gas prices on the rise again. So, overall Ukraine related risks for investment markets remain high in the short term.

Turning to the US, The Federal Reserve is getting even more hawkish, (expectations that interest rates will rise further). This will push bond yields higher and prices lower.

In the UK we also saw another stronger than expected acceleration in inflation for February to 6.2%. The challenge for central banks is they are battling both short term increases to prices, but also longer-term inflation expectations. The consequence of this is a situation where we could see a spiralling effect in price and wage inflation.

In terms of factor performance, momentum, growth, and quality performed the best over March.

Looking to defensive assets, unsurprisingly major bond indices fell, with yields in the short end of the curve rising, with the longer end remaining broadly the same, as the pace of rate rises are expected to be temporary.
