

Risk Profile Description

The portfolio aims to have 30% exposure to Equity and Property assets and 70% exposure to Fixed Interest securities. Over the medium to longer term, the 30% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK and overseas equities in both developed and emerging markets. The equity risk is balanced by a 70% allocation to high quality bonds and investment grade bonds.

Bravo ESG is a range of evidence-based, total-return portfolios designed using a systematic discipline, with Environmental, Social and Governance (ESG) front and centre of the investment process.

The portfolios are defined according to ESG criteria, so investors can see and understand clearly how they are constructed. In addition to understanding the key aims and objectives, we believe that investors in our ESG solutions should also know what is the composition of the portfolios. The Bravo range has undergone rigorous ESG screening with the fund and portfolio exclusions and objectives listed below:

Each fund in the portfolio excludes the following:

- Tobacco Producers
- Controversial Weapons
- Nuclear Weapons

The overall portfolio has the following characteristics:

- 50% less CO2 emissions than the MSCI ACWI World Index
- Revenue of no more than 5% from Alcohol sales, Gambling, Civilian Weapons, Nuclear Power and Thermal Coal

Portfolio Comments

July was dominated by a familiar mix of slowing growth, sticky inflation risks, geopolitical uncertainty and central bank caution.

Global tensions remained an important driver of sentiment, with investors monitoring events in the Middle East, the security of key energy shipping routes such as the Strait of Hormuz, the ongoing war in Ukraine and rising trade frictions between the US, Europe and China. These risks kept energy prices and supply chains in focus, with any renewed disruption having the potential to revive inflationary pressure and delay interest rate cuts.

In the UK, the Bank of England left Bank Rate unchanged at 3.75%, with a split vote reflecting the delicate balance between easing domestic price pressures and renewed upside risks from higher energy costs. CPI inflation had fallen to 2.6%, but policymakers warned that volatility in oil and gas prices could push inflation higher again later in the year. The message was therefore one of patience: policy is restrictive, but the Bank is not yet confident enough to signal a decisive easing cycle. UK government policy remained focused on the cost of living and fiscal discipline, with markets attentive to any measures that could affect borrowing requirements or household disposable income.

Equity markets were generally strong over the month, although leadership remained uneven by region and sector. Global investors continued to favour areas with resilient earnings, strong balance sheets and exposure to structural growth themes. In local currency US markets were broadly flat but tech heavy sectors were volatile. European markets were more mixed, with weaker growth indicators and political uncertainty weighing on sentiment. In the UK, equities performed relatively well, helped by attractive valuations, resilient dividend yields and a more internationally exposed large-cap index. However, domestically focused companies performed well with renewed interest in the broadening out away from AI.

Fixed interest markets were more finely balanced. Global government bond yields ended the month little changed to slightly higher, as investors weighed moderating inflation against the risk that energy prices could delay rate cuts. Credit spreads were stable, suggesting limited concern around near-term default risk, although valuations leave less room for disappointment. UK gilts were volatile around the Bank of England meeting, with shorter-dated yields most sensitive to changing expectations for interest rates. Longer-dated gilts remained influenced by fiscal concerns, supply expectations and global bond market moves. Overall, the backdrop remains constructive for income generation, but duration risk should be managed carefully while inflation risks remain two-sided.

Our view remains that portfolios should stay well diversified, with a focus on quality, valuation discipline and resilience across asset classes. While recent data shows inflation is moving in the right direction, the path lower is unlikely to be smooth, particularly given geopolitical risks and the potential for renewed energy price volatility.

Benchmark Disclaimers

The IA (Investment Association) sector is used as the comparator. This is considered appropriate for investors to use when comparing performance as the sector is made up of funds with a similar asset allocation as defined by the IA. The sector is not constructed as an index, therefore as funds enter or leave, the sector composition can change, but it is considered that the sector remains a useful and relevant comparator for investors to assess performance within a relevant peer group.
