

Risk Profile Description

The portfolio aims to have 40% exposure to equity and property assets and 60% exposure to Fixed Interest securities. Over the medium to longer term, the 40% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK and overseas equities in both developed and emerging markets. The equity risk is balanced by a 60% allocation to high quality bonds and investment grade bonds.

Bravo ESG is a range of evidence-based, total-return portfolios designed using a systematic discipline, with Environmental, Social and Governance (ESG) front and centre of the investment process.

The portfolios are defined according to ESG criteria, so investors can see and understand clearly how they are constructed. In addition to understanding the key aims and objectives, we believe that investors in our ESG solutions should also know what is the composition of the portfolios. The Bravo range has undergone rigorous ESG screening with the fund and portfolio exclusions and objectives listed below:

Each fund in the portfolio excludes the following:

- Tobacco Producers
- Controversial Weapons
- Nuclear Weapons

The overall portfolio has the following characteristics:

- 50% less CO2 emissions than the MSCI ACWI
- Revenue of no more than 5% from Alcohol sales, Gambling, Civilian Weapons, Nuclear Power and Thermal Coal

Portfolio Comments

August was a positive month for global markets, despite ongoing uncertainty around inflation, government debt, and geopolitical tensions. Investor attention centred on the annual Jackson Hole conference, where policymakers discussed the outlook for inflation, interest rates, and economic growth. While these issues remained in focus, corporate earnings proved broadly resilient and market gains continued to widen beyond the largest technology stocks.

Bond markets were a key area of focus. Concerns about elevated fiscal deficits in the US, Japan, and parts of Europe, together with inflation proving more persistent than many expected, led investors to reassess the outlook for interest rates and government borrowing costs. This contributed to higher bond yields over the summer. Bonds continue to play an important role in diversified portfolios and offer attractive income opportunities, but investors are paying closer attention to inflation risk and the sustainability of government debt.

This backdrop reinforces the importance of diversification across defensive assets. Alongside traditional bonds, alternative investments can provide additional resilience and help portfolios navigate a wider range of economic outcomes.

Equity market performance also became more balanced. Artificial intelligence remains a significant long-term theme, and strong results from leading AI-related companies helped support confidence in the sector. However, some of the strongest recent performance came from outside the largest US technology stocks. Energy, financials, and industrials delivered encouraging earnings, while UK, European, and Japanese equities outperformed US markets over recent months.

This broadening of returns is encouraging. Rather than relying on a narrow group of technology companies, opportunities are emerging across a wider range of sectors, industries and regions. Smaller companies also showed signs of recovery during August, supported by improving investor sentiment and greater confidence in the economic outlook.

In the UK, takeover activity remained elevated, particularly among mid-sized businesses. Interest from private equity and overseas buyers continues to highlight the value opportunities available in parts of the UK market, although challenges remain.

Geopolitical tensions also remain an important consideration, particularly in the Middle East and Eastern Europe. Markets have become more resilient to daily headlines, but these events still have implications for commodity prices, supply chains, and inflation. Longer-term forces, including demographic change and the reshaping of global supply chains, may also keep inflation higher than in the previous decade.

Looking ahead, investors are likely to remain focused on inflation, interest rate expectations, government borrowing levels, corporate earnings, and the continued development of AI. The key point is that markets are no longer being driven by a single theme. Participation is widening, which creates a broader opportunity set, but also reinforces the need for careful portfolio construction.

Overall, August demonstrated the benefits of maintaining a balanced and diversified investment approach. While inflation, debt levels, and geopolitical risks remain key considerations, resilient earnings and broader market leadership provide reasons for cautious optimism. For investors, the focus remains on long-term objectives rather than short-term headlines. A portfolio combining equities, bonds, and alternative investments remains well positioned to capture opportunities across markets while managing the risks of an evolving environment.

Benchmark Disclaimers

The IA (Investment Association) sector is used as the comparator. This is considered appropriate for investors to use when comparing performance as the sector is made up of funds with a similar asset allocation as defined by the IA. The sector is not constructed as an index, therefore as funds enter or leave, the sector composition can change, but it is considered that the sector remains a useful and relevant comparator for investors to assess performance within a relevant peer group.
