

Risk Profile Description

The portfolio aims to have 80% exposure to Equity and Property assets and 20% exposure to Fixed Interest securities. Over the medium to longer term, the 80% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK and overseas equities in both developed and emerging markets. The equity risk is balanced by a 20% allocation to high-quality bonds and investment grade.

Bravo ESG is a range of evidence-based, total-return portfolios designed using a systematic discipline, with Environmental, Social and Governance (ESG) front and centre of the investment process.

The portfolios are defined according to ESG criteria, so investors can see and understand clearly how they are constructed. In addition to understanding the key aims and objectives, we believe that investors in our ESG solutions should also know what is the composition of the portfolios. The Bravo range has undergone rigorous ESG screening with the fund and portfolio exclusions and objectives listed below:

Each fund in the portfolio excludes the following:

- Tobacco Producers
- Controversial Weapons
- Nuclear Weapons

The overall portfolio has the following characteristics:

- 50% less CO2 emissions than the MSCI ACWI World Index
- Revenue of no more than 5% from Alcohol sales, Gambling, Civilian Weapons, Nuclear Power and Thermal Coal

Portfolio Comments

As the Bravo ESG portfolios are constructed using a combination of index-tracking and multifactor funds, the monthly portfolio movements are summarised below

January saw further lockdowns in the UK and across the world as the cases of COVID-19 started to increase. We also saw market focus switching to the vaccine roll out, with countries with quicker vaccination programs being perceived to emerge from the pandemic first.

Joe Biden also took over as US President with markets responding positively towards further economic stimulus packages as well as executive orders which reinstated several international agreements.

All major equity markets were positive at the start of the month with the vaccine roll out giving confidence that the global economy will start opening by the middle of the year. The last few days of January saw a market wide sell-off following the Reddit movement to buy shares of companies which had been shorted. This resulted in large losses for hedge funds, which caused uncertainty in the market, which saw investors reducing their exposure to equities.

Emerging Market and Asian equities were the best two performing areas over the month up 3.77% and 2.96% respectively. The FTSE 100, S&P 500 and European markets were down 0.79%, 1.04% and 1.34% respectively. This was due to a continued increase in COVID cases in the regions, as well as being affected by the Reddit movement by a greater amount.

With the vaccine roll out and further stimulus, inflation expectations started to increase which saw fixed interest prices fall in January. UK Gilts and US treasuries were down around 1.5% with corporate bond markets also falling by around 1%.
