

Risk Profile Description

The portfolio aims to have 30% exposure to equity and property assets and 70% exposure to Fixed Interest securities. Over the medium to longer term, the 30% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets. The equity risk is balanced by a 70% allocation to high-quality bonds and investment grade bonds.

Portfolio Comments

As the Tempo portfolios are constructed using a combination of index-tracking and multifactor funds, the monthly portfolio movements are summarised below.

March saw the continued divergence of the vaccine roll out and the impact this is having on different regions of the world. The UK and US continued to see further progress, with the UK now having seen the first dose given to over 50% of the adult population. Both have now started to see lockdown restrictions ease, with a roadmap to come out of lockdowns in the summer. This contrasts with Europe which has been hit by a third wave with many countries tightening lockdowns.

Major stock markets were positive in March with the FTSE 100 up 4.16%, S&P 500 up 4.34% and the Euro STOXX up 6.64%. This was due to the optimism that the major economies are starting to come through the pandemic and that the global stimulus packages will support the economies further. Broadly speaking companies reported positive results throughout March which also helped sentiment. Carrying on from February 'value' companies tended to outperform growth and technology companies, however the technology and growth indices were still positive for the month.

Government bond yields stabilised in March following the volatility seen in the first two months of the year as yields increased from record lows. This was helped by the US federal reserve stating that it did not see the need for interest rate rises in the near term, even if inflation came back into the system. The US 10-year Treasury yield fell 0.024% to 1.72% with the UK 10-year gilt finishing the month at 0.84%. The market has priced in, that there will be inflation in the short term but does not expect this to carry on for the medium to long term. Any change to this expectation is likely to have an effect on bond yields and a knock-on effect to equity markets.
