

### Risk Profile Description

The portfolio aims to have 30% exposure to equity and property assets and 70% exposure to Fixed Interest securities. Over the medium to longer term, the 30% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets. The equity risk is balanced by a 70% allocation to high-quality bonds and investment grade bonds.

### Cumulative Tempo 30 returns of £100k invested

## Portfolio Comments

August was another month of growth asset volatility. The cause is a theme that has been affecting financial markets all year - how far will interest rates rise in the major economies to combat rising inflation?

Starting with the volatility story, Wall Street uses an index as a barometer to see what the expected volatility will be over a 30-day period. This index hit a seven-week high recently, due to expectations of further rate increases in September. This comes on the back of US inflation data, which is still running near its highest level in more than 40 years. This is mirrored in the UK.

This volatility was also on the back of some strong words from the US Federal Reserve Chair this month. While higher interest rates, slower economic growth and softer labour market conditions will bring down inflation, they will also bring some pain to households and businesses. These are the unfortunate costs of reducing inflation.

Picking up on economic growth, as central banks have raised interest rates in recent months in response to escalating prices, this makes borrowing more expensive for companies and individuals and this has fuelled the current concerns that economies are falling into recession.

Consumers are grappling with rising energy costs and surging household prices, which continues to underpin a very challenging cost of living crisis.

Turning to factor performance, Value and Small-Cap performed the best over the month, whilst Growth and Quality retraced. This performance in turn impacted ESG funds which are more growth factor led.

Turning to defensive assets, August saw a retracement in pricing and yields lift, in reaction to the expectation of further interest rates rises. This was seen in both UK and US 10-year government bonds.

In summary, financial markets continue to see continued volatility and in the short-term at least, the key discussion points will remain inflation, interest rates and worries over economic growth. For investors, maintaining a diversified portfolio remains key to riding through these challenging conditions.
