

Risk Profile Description

The portfolio aims to have 60% exposure to equity and property assets and 40% exposure to Fixed Interest securities. Over the medium to longer term, the 60% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets. The equity risk is balanced by a 40% allocation to high-quality bonds and investment grade.

Portfolio Comments

As the Tempo portfolios are constructed using a combination of index-tracking and multifactor funds, the monthly portfolio movements are summarised below.

December saw the equity markets focus on BREXIT and the new strain of the Coronavirus, which emerged in the UK. After four and a half years, an 11th hour agreement was finally reached between the UK and the EU with the new relationship starting on the 1st January 2021. The deal was more positive for trade than expected, with no physical barriers. However the deal was less favourable for financial services than was hoped, and further negotiations are required. The UK stock market reacted positively to this news with the FTSE 250 up 3.36% in December and FTSE 100 up 1.36%. The biggest movement off the back of the BREXIT deal was currency, with Sterling up to 1.37 against the Dollar which was the highest level in over two years.

A new strain of the Coronavirus was also detected in the UK which transmits more easily than the first strain. This caused further lockdowns in the UK with the majority of Europe already under tighter restrictions. There was increased volatility in the markets, however they continued to look through this with the focus being on the roll out of the vaccine. On the back of this positive news, the US market was up 2.65% for the month and European markets up 0.81%. Emerging Markets were the biggest beneficiaries up 5.9%, with Asian Equities up 2.41%.

With investors favouring Equity markets in December, Fixed Interest markets were relatively flat for the month with US treasuries down 2%. Riskier corporate bonds performed similarly, with most indices down around 1% for the month. UK Gilts were the exception, up nearly 1% after the positive Brexit news.
