

### Risk Profile Description

The portfolio aims to have 70% exposure to equity and property assets and 30% exposure to Fixed Interest securities. Over the medium to longer term, the 70% exposure to risks and expected rewards of equity ownership should help to deliver moderate, inflation-plus returns. The equity exposure is invested in both UK equities and overseas equity in both developed and emerging markets. The equity risk is balanced by a 30% allocation to high-quality bonds and investment grade bonds.

## Portfolio Comments

Financial markets have continued to see yet more volatility through April, with worries about central bank rate hikes, inflation, Chinese covid lockdowns and worries over global growth. However, this has been offset by generally good earnings news.

While investment markets seem to have moved on from worrying too much about the war in Ukraine, the risk of escalation remains with Russia cutting Poland and Bulgaria off from its gas supply as part of a strategy to put more pressure on western Europe.

On the economic front, there are signs that inflationary pressures may be peaking in the US. However, the expectation is that the Fed and other central banks will continue to tighten in the short term. The Fed is expected to raise the Fed Funds rate by 0.5% at its May meeting. The Bank of England is also expected to follow suit and increase the key interest rate to 1% next month.

Looking at growth assets, US March quarter earnings reports continued to surprise on the upside with earnings on track to rise around 11% y-o-y which is up from initial expectation for a 4.3% y-o-y increase. Energy, Materials and Industrials are seeing the strongest earnings growth. However, a key watch going forward will be the impact of rising costs.

Looking at sectors, Technology lost ground over the month, reversing the rebound seen through March. Quality growth stock have had a difficult start to 2022, seeing rotation into more value and defensive assets.

Leading on from this, over the month the factors that performed the best were Value and then Small-Cap, with unsurprisingly Growth performing the worse.

Turning to defensive assets, unsurprisingly conventional bonds remain under some short-term pressure given the expectations for inflation and interest rate in the near term.

In the near term, financial markets are likely to remain volatile as they continue to grapple with inflation and the direction of interest rates. However, if we see further positive company results this may act as a stabiliser in the coming weeks.
